

DIGITAL LITERACY PROJECT REPORT

Name: Aryana Sharma

Reg No: 25BHI10001

Branch: B.Tech Health Informatics

Course Code: CSE0001

Date: 30-03-26

Introduction

This project is part of the Digital Literacy course at VIT Bhopal University. The aim of this project is to develop awareness about digital tools, online safety, and professional communication. As a Student Digital Ambassador, I explored various platforms and learned how to use them effectively. This project helped me understand the importance of maintaining a digital presence and using the internet responsibly.

Task 1: Infographic

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic explains the concept of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I included key points such as using strong passwords, avoiding suspicious links, and creating professional profiles.

Canva was very easy to use and provided useful templates and icons that made the design visually appealing. One interesting part of this task was organizing information in a simple and attractive way so that it is easy to understand. However, choosing the right layout and keeping the content concise was slightly challenging.

Task 2: Digital Portfolio

For Task 2, I created professional profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for storing and sharing coding projects, LinkedIn is a professional networking platform, and Kaggle is used for data science and machine learning practice.

Creating these profiles helped me understand the importance of building an online presence. Over the next four years, I plan to regularly update my GitHub with projects, connect with professionals on LinkedIn, and practice data-related skills on Kaggle. This will help me improve my technical skills and prepare for internships and job opportunities.

Task 3: Platforms

For Task 3, I explored platforms for coding practice and collaboration. I used HackerRank to solve a beginner-level programming problem, which helped me understand basic coding logic and problem-solving skills.

I also created a Google Form quiz on digital literacy awareness. The quiz included multiple-choice and short-

answer questions. This task helped me understand how online tools can be used for collaboration and academic purposes.

Task 4: Email Etiquette

In Task 4, I learned about professional communication and email etiquette. I wrote two formal emails, one requesting an assignment extension and another applying for an internship.

I also created a checklist of do's and don'ts for social media usage. Poor digital communication can lead to misunderstandings and create a negative impression. This task helped me understand the importance of clear and respectful communication.

Task 5: Cybercrime Awareness

In Task 5, I learned about phishing, a common type of cybercrime where attackers trick users into revealing sensitive information. I created a case study and a prevention checklist.

This task made me aware of online threats and how to stay safe. One habit I will adopt is to always verify links and avoid sharing personal information online. I will also use strong passwords and enable additional security measures.

Conclusion

This project helped me gain practical knowledge about digital literacy. I learned how to use online platforms, communicate professionally, and stay safe on the internet. Overall, it was a valuable learning experience that will help me in my academic and professional journey.
